Art Unit: 1755

DETAILED ACTION

1. The indicated allowability of claims 42-44 is withdrawn in view of newly discovered reference(s). Rejections based on the newly cited reference(s) follow.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 3. Claims 1 and 26 are rejected under 35 U.S.C. 102(b) as being anticipated by Mueller et al (3,730,789).

Mueller et al discloses the use of ammonium perchlorate in a gelled monopropellant composition that uses silica gel as the thickener.

4. Claims 1 and 26 are rejected under 35 U.S.C. 102(b) as being anticipated by Barnhard, IV et al (4,058,420).

Barnhard, IV et al discloses the use of RDX and PETN in a gelled explosive that uses silica gel as the thickener.

Claim Rejections - 35 USC § 103

- 5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Art Unit: 1755

6. Claims 1, 26-41, and 45 are rejected under 35 U.S.C. 103(a) as being unpatentable over Attia (6,080,281) in view of Barnhard, IV et al (4,058,420) and the article from Science and Technology Review.

Attia discloses the use of sol-gel processing to form mixed oxides. The mixed oxides can be energetic. The particular sol-gel process is not disclosed.

Barnhard, IV et al discloses the use of RDX and PETN in a gelled explosive that uses silica gel as the thickener.

The article from Science and Technology Review (pg 23). teaches the use of a sol-gel process that is less expensive.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to use the sol-gel processing disclosed by Attia with the explosive taught by Barnhard since Attia discloses that the sol-gel processing is capable of being used with energetic applications. It would also have been obvious to use the improved sol-gel process as taught by the Science and Technology article with the composition disclosed by Attia and Barnhard since the article suggests that the method is less expensive and also that it forms a better aerogel.

7. Claims 1, 26-41, and 45 are rejected under 35 U.S.C. 103(a) as being unpatentable over Attia (6,080,281) in view of Mueller et al (3,730,789) and the article from Science and Technology Review.

Attia discloses the use of sol-gel processing to form mixed oxides. The mixed oxides can be energetic. The particular sol-gel process is not disclosed.

Mueller et al teaches the use of ammonium perchlorate in a gelled monopropellant composition that uses silica gel as the thickener.

The article from Science and Technology Review (pg 23), teaches the use of a sol-gel process that is less expensive.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to use the sol-gel processing disclosed by Attia with the explosive taught by Mueller since Attia discloses that the sol-gel processing is capable of being used with energetic applications. It would also have been obvious to use the improved sol-gel process as taught by the Science and Technology article with the composition disclosed by Attia and Mueller since the article suggests that the method is less expensive and also that it forms a better aerogel.

8. Claims 1, 26-41 and 45 are rejected under 35 U.S.C. 103(a) as being unpatentable over Katsuta et al(4,317,691) in view of Mueller et al (3,730,789) and the article from Science and Technology Review.

Katsuta discloses the use of aerogel which is made by the sol-gel processing with an explosive composition. The claims do not require all of the composition to be made by the sol-gel process and this reference discloses a portion of the explosive being formed by the sol-gel process.

Mueller et al discloses the use of ammonium perchlorate in a gelled monopropellant composition that uses silica gel as the thickener.

The article from Science and Technology Review (pg 23). teaches the use of a sol-gel process that is less expensive.

Art Unit: 1755

It would have been obvious to one having ordinary skill in the art at the time the invention was made to use the sol-gel processing disclosed by Katsuta with the explosive taught by Mueller since Katsuta discloses that the sol-gel processing is capable of being used with explosive applications. It would also have been obvious to use the improved sol-gel process as taught by the Science and Technology article with the composition disclosed by Attia and Mueller since the article suggests that the method is less expensive and also that it forms a better aerogel.

9. Claims 1, 26-41 and 45 are rejected under 35 U.S.C. 103(a) as being unpatentable over Katsuta et al(4,317,691) in view of Barnhard, IV et al (4,058,420) and the article from Science and Technology Review.

Katsuta discloses the use of aerogel which is made by the sol-gel processing with an explosive composition. The claims do not require all of the composition to be made by the sol-gel process and this reference discloses a portion of the explosive being formed by the sol-gel process.

Barnhard, IV et al discloses the use of RDX and PETN in a gelled explosive that uses silica gel as the thickener.

The article from Science and Technology Review (pg 23). teaches the use of a sol-gel process that is less expensive.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to use the sol-gel processing disclosed by Katsuta with the explosive taught by Barnhard since Katsuta discloses that the sol-gel processing is capable of being used with explosive applications. It would also have been obvious to

Application/Control Number: 09/481,043 Page 6

Art Unit: 1755

use the improved sol-gel process as taught by the Science and Technology article with the composition disclosed by Attia and Barnhard since the article suggests that the method is less expensive and also that it forms a better aerogel.

Conclusion

10. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Aileen B. Felton whose telephone number is 571.272.6875. The examiner can normally be reached on Monday-Friday 6:30-4:00, except alternate Fridays.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jerry Lorengo can be reached on 571.272.1233. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
